The Innovation Center is a plus-100-member global team that drives growth in Eaton through innovation. Located at five cross-functional facilities in the US and India, the Center's innovators are engaged in the wide-ranging tasks of conceiving and validating innovative new business ideas.

In addition to our traditional role of advanced research & development – inventing new technologies for Eaton - the Innovation Center also seeks external technologies, searching for decisive competitive advantages. Our daily work is to leverage these technologies in significant business cases and justify the commercial development of the next generation of products and solutions.

Innovation Center Central Purpose

What

Drive Eaton's Profitable Growth through Global Innovation

How

Invent and employ new technologies to solve Eaton's customers' problems with decisive competitive advantage.

Develop innovation leaders for Eaton

The Innovation Center is active in many of Eaton's core businesses: hydraulics, electrical components and power quality, and vehicle power systems and drive trains. We also support Eaton's engagement with new businesses: hybrid vehicles, emissions control, renewable energy, and all aspects of fuel economy and energy efficiency. We are eager to work with each of Eaton's diverse businesses and help develop breakthrough ideas in any markets that can drive growth.

Michael Wynblatt, Ph.D.
VP – Engineering Technology

"Eaton has a tremendous history of successful innovations, but in the modern business climate we need them to come even more quickly and consistently. We are developing the Innovation Center as an innovation engine, which can *systematically* develop ideas that solve real customer problems with a decisive competitive advantage, generating a significant growth opportunity."
